

BlueVive Booster™

Advanced Peptide Bio-Remodeling Booster

Copper-Activated Regenerative Peptide Complex

BlueVive Booster™ is an advanced regenerative skin booster combining **Copper Tripeptide-1 (GHK-Cu)** with **Non-Crosslinked Hyaluronic Acid** to support extracellular matrix remodeling, collagen synthesis, skin hydration, and skin recovery.

Its synergistic formulation is designed to support skin firmness, elasticity, texture, and overall skin quality as part of a professional aesthetic skin-remodeling approach.

Product Composition

BlueVive Booster™

Lyophilized Regenerative Peptide Complex

Primary Bioactive:
Copper Tripeptide-1 (GHK-Cu)

Supporting Component:
Non-Crosslinked Hyaluronic Acid

The product system combines a **lyophilized regenerative peptide complex** with a Non-Crosslinked Hyaluronic Acid component.

Product Specifications

Specification	Details
Product Name	BlueVive Booster™

Product Category	Advanced Peptide Bio-Remodeling Booster
Product Type	Copper-Activated Regenerative Peptide Complex
Primary Bioactive	Copper Tripeptide-1 (GHK-Cu)
Supporting Component	Non-Crosslinked Hyaluronic Acid
Peptide Form	Lyophilized Powder
Peptide Quantity	300 mg
Origin	Republic of Korea
Manufacturer	Vesco Science Co., Ltd.
Marketed By	EverCeutical Private Limited
Intended Use	Professional Aesthetic Use

Key Benefits

- Supports Collagen & Elastin Synthesis
 - Supports Extracellular Matrix (ECM) Regeneration
 - Enhances Skin Firmness & Elasticity
 - Improves Skin Texture & Quality
 - Supports Post-Procedure Recovery
 - Supports Long-Term Skin Remodeling
 - Supports Improved Skin Hydration
 - Helps Improve the Appearance of Fine Lines & Wrinkles
-

Powered by GHK-Cu

Copper Tripeptide-1

GHK-Cu (Copper Tripeptide-1) is the key bioactive peptide component of BlueVive Booster™.

Combined with **Non-Crosslinked Hyaluronic Acid**, GHK-Cu forms a synergistic regenerative system designed to support cellular repair pathways, collagen synthesis, skin hydration, and extracellular matrix remodeling.

GHK-Cu Characteristics

- Highly Effective Peptide
 - Stable & Potent
 - Optimal Bioactivity
 - Clinical-Grade Formulation
-

How BlueVive Booster™ Works

BlueVive Booster™ combines **Copper Tripeptide-1 (GHK-Cu)** with **Non-Crosslinked Hyaluronic Acid** to create a synergistic regenerative system.

The formulation supports a multi-dimensional approach to skin remodeling:

GHK-Cu + Hyaluronic Acid

Cellular Repair Support

Extracellular Matrix Remodeling

Collagen & Elastin Support

Improved Skin Quality & Rejuvenation

Skin Remodeling & Structural Support

Firmness & Structural Support

BlueVive Booster™ supports:

- Improved skin firmness
- Enhanced structural support
- Reduced appearance of fine lines

Elasticity & Skin Quality

The formulation is positioned to support:

- Better elasticity
- Improved skin bounce
- More youthful-looking skin

Extracellular Matrix Support

BlueVive Booster™ supports pathways associated with:

- **Collagen**
 - **Elastin**
 - **Glycosaminoglycans (GAGs)**
 - **Tissue Remodeling Factors**
-

Treatment Indications

BlueVive Booster™ is positioned for professional aesthetic applications addressing:

- Fine Lines & Wrinkles
 - Aging Skin
 - Skin Laxity
 - Dull Skin
 - Uneven Skin Texture
 - Skin Quality Enhancement
 - Post-Procedure Recovery
-

Professional Aesthetic Applications

BlueVive Booster™ for use in professional aesthetic protocols following procedures such as:

- **Microneedling**
 - **Exosome Therapy**
 - **RF Treatments**
 - **Laser Procedures**
 - **Mesotherapy**
-
