

WHARTEXA™ 20B

American HUC-MSC-Derived Exosome Preparation

Whartexa™ 20B is a standardized extracellular vesicle preparation derived from **Human Umbilical Cord Mesenchymal Stem Cells (HUC-MSCs)** sourced from **Wharton's Jelly**.

Developed and manufactured by **Nanoventra**, an American biotechnology company based in **Lehi, Utah, USA**, Whartexa™ 20B is part of the Whartexa™ platform, providing a standardized preparation with a concentration of approximately **20 Billion particles**.

Product Highlights

- **American Manufactured**
- **HUC-MSC Derived**
- **Wharton's Jelly Source**
- **20 Billion Particle Concentration**
- **Cryopreserved Formulation**
- **Storage: -20°C**
- Advanced extracellular vesicle purification
- Controlled laboratory-grade isolation
- Professional research and biotechnology applications

Product Specifications

Specification	Details
Product Name	Whartexa™ 20B
Product Type	HUC-MSC-Derived Extracellular Vesicle / Exosome Preparation
Biological Source	Human Umbilical Cord

Cell Source	Human Umbilical Cord Mesenchymal Stem Cells (HUC-MSCs)
--------------------	--

Tissue Source	Wharton's Jelly
----------------------	-----------------

Particle Concentration	20 Billion Particles
-------------------------------	----------------------

Formulation	Cryopreserved
--------------------	---------------

Storage Condition	-20°C
--------------------------	-------

Manufacturer	Nanoventra
---------------------	------------

Country of Manufacture	United States of America
-------------------------------	--------------------------

Intended Use	Professional Research & Biotechnology Applications
---------------------	--

Source & Technology

Whartexa™ 20B is derived from **Wharton's Jelly Human Umbilical Cord Mesenchymal Stem Cells (HUC-MSCs)**.

The product is processed through controlled extracellular vesicle isolation and purification workflows and supplied in a cryopreserved format designed to support extracellular vesicle integrity and formulation consistency.

Quality & Characterization

The Whartexa™ platform focuses on controlled processing and quality-oriented characterization, including evaluation of:

- Extracellular vesicle integrity
- Particle concentration
- Particle characteristics
- Purification consistency
- Product stability
- Handling reproducibility

Storage & Handling

Storage Temperature: -20°C

- Maintain cryopreserved conditions during handling.
- Avoid repeated freeze–thaw exposure.
- Minimize unnecessary temperature fluctuations.
- Follow the applicable product handling instructions.

WHARTEXA™ 60B

American HUC-MSC-Derived Exosome Preparation

Whartexa™ 60B is a high-concentration extracellular vesicle preparation derived from **Human Umbilical Cord Mesenchymal Stem Cells (HUC-MSCs)** sourced from **Wharton's Jelly**.

Developed and manufactured by **Nanovenbra**, an American biotechnology company based in **Lehi, Utah, USA**, Whartexa™ 60B represents the flagship high-concentration formulation within the proprietary Whartexa™ platform.

Product Highlights

- **American Manufactured**
- **HUC-MSC Derived**
- **Wharton's Jelly Source**
- **60 Billion Particle Concentration**
- **Ultra-High-Concentration Formulation**
- **Cryopreserved**
- **Storage: -20°C**
- Advanced extracellular vesicle purification
- Controlled laboratory-grade isolation
- Professional research and biotechnology applications

Product Specifications

Source & Technology

Whartexa™ 60B is derived from **Wharton's Jelly Human Umbilical Cord Mesenchymal Stem Cells (HUC-MSCs)**.

The formulation is processed through controlled extracellular vesicle isolation and purification workflows, followed by cryopreservation designed to support extracellular vesicle integrity and formulation consistency.

Quality & Characterization

The Whartexa™ platform applies multi-stage processing and quality-oriented methodologies with focus on:

- Extracellular vesicle integrity

- Particle concentration consistency
- Biological stability
- Purification precision
- Handling reproducibility
- Controlled cryopreservation

Storage & Handling

Storage Temperature: –20°C

- Maintain cryopreserved conditions during handling.
- Avoid repeated freeze–thaw exposure.
- Minimize unnecessary temperature fluctuations.
- Follow the applicable product handling instructions.
