

HYALIQUE-X

Advanced Cross-Linked Hyaluronic Acid Dermal Fillers

CROSS-LINKED HA TECHNOLOGY

HYALIQUE-X is a sterile, cross-linked hyaluronic acid dermal filler designed to restore facial volume, enhance contour definition, and deliver natural-looking aesthetic results. Its advanced formulation provides smooth injectability, excellent tissue integration, balanced structural support, and long-lasting performance across a wide range of aesthetic applications.

Small MolecularWeight Hyaluronic Acid 1ml (Soft Filler)

→ The optimized low-viscosity formulation allows for even distribution within the dermal tissue, providing excellent hydration, flexibility, and natural softness. Its advanced rheological properties ensure precise placement with minimal tissue resistance and high patient comfort.

Large MolecularWeight Hyaluronic Acid 1ml (Hard Filler)

→ The high-density, high-viscosity formulation provides exceptional lifting capacity, excellent projection, and superior shape retention within deeper tissue planes. Its optimized rheological properties ensure controlled placement, enhanced structural support, and durable aesthetic outcomes while maintaining natural facial harmony.

Small MolecularWeight Hyaluronic Acid 2ml (Soft Filler)

→ The optimized low-viscosity formulation allows for smooth and even distribution within the dermal tissue, delivering excellent hydration, flexibility, and natural softness. Its advanced rheological profile ensures precise injection, seamless tissue integration, and refined a

Large MolecularWeight Hyaluronic Acid 2ml (Hard Filler)

→ The advanced high-density formulation delivers exceptional lifting capacity, outstanding shape retention, and excellent tissue support within deeper anatomical layers. Its optimized rheological properties ensure controlled injection, precise placement, and durable volumizing performance while maintaining balanced and natural-looking facial contours.
